

VALIDATION CERTIFICATE

Pioneer Hi-Bred International Inc., member of Corteva Agriscience group of companies ("Pioneer"), validates that the following seed products were developed not to contain foreign DNA (i.e., are "non-transgenic"). Foreign DNA is DNA sequence(s) from a non-sexually compatible species, outside the gene pool of the relevant crop species.*

In addition, Pioneer validates that the following seed products were developed without the use of recombinant DNA modification technology, or other methods such as oligonucleotide-directed mutagenesis (ODM); RNAi, Zinc finger nuclease (ZFN); transcription activator-like effector nucleases (TALEN), or interspaced short palindromic repeats (CRISPR).

**P63ME80, P64ME01, P63HE501, P63HE60,
P63HE920, P64HE188, P64HE101**

Pioneer seed production and testing activities are conducted under a rigorous quality management system so that Pioneer seed products meet or exceed Pioneer's seed purity standards, which are set to help ensure product purity. However, conventional and biotechnology traits can be commingled, for example, physically as part of the seed handling process or genetically through cross-pollination. Thus, 100% purity, either in genetic make-up or in the absence of foreign material content, is not currently achievable for any agricultural seed product.
