

# POLIERCORE

## PROTECTION

TO THE POWER OF PIONEER

PowerCore™ trait technology provides excellent control of above-ground lepidopteran pests.

Through its multiple modes of action, PowerCore™ technology combines three genes that control major maize pests, such as maize stalk borer (Busseola fusca) and spotted stalk borer (Chilo partellus) and is tolerant to herbicides.

#### **Protection From Pests**

PowerCore<sup>™</sup> technology is a pyramid of Bt traits that combines three proteins to deliver broad spectrum protection against above-ground pests.

#### Protecting Your Maize

Its efficacy has been demonstrated across multiple years of trials in major maize-growing regions. It is an important product for insect resistance management (IRM).

### Technology That Protects

PowerCore<sup>™</sup> technology provides consistent, excellent control of major lepidopteran pests of maize and the multiple modes of action also ensure the delay of resistance.
